Remote/Community Isolations:

- None reported.

WEATHER OF CONCERN

Weather of Concern

- Southern California: A strong and potentially damaging wind event is expected for portions of Los Angeles, Orange, Riverside, San Bernardino, San Diego, and Ventura Counties late tonight through Saturday afternoon. Gusty northeast winds will likely develop early this evening and strengthen overnight. Winds should peak in strength Friday and Friday night before slowly diminishing through the day on Saturday. With this event, strong and damaging winds are likely in many areas not usually impacted by strong offshore winds. Potential impacts for the area include: downed power lines and trees, hazardous driving conditions for high profile vehicles, and possible critical fire weather conditions.

Active Weather Warnings, Watches and Advisories by County:

http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php

Key Points

12/1 – 12/7

Thursday

- No significant weather hazards expected.

Friday-Saturday

- Strong and gusty Santa Ana winds for the S. CA mountains (strongest Friday night-Saturday morning); moderate fire weather danger.
- Additionally: Strong winds over the Sierra Nevada (mainly Friday); possible impacts to travel over passes.
- Cold temperatures inland valleys (potential impacts to crops), mainly San Joaquin Valley.

Sunday-Wednesday

- Increasing chances for rain and mountain snow in northern CA (mainly northwestern CA) beginning Sunday. Light snow may produce locally hazardous road conditions (mainly Sun-Mon in northeastern CA).

California OES Impact Threat Matrix

	Slight Threat
	No Discernible Threat

Day 2-3 Weather Hazards

Valid: 0800 Fri – 0800 Sun

-  High Threat
-  Moderate Threat
-  Slight Threat

WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

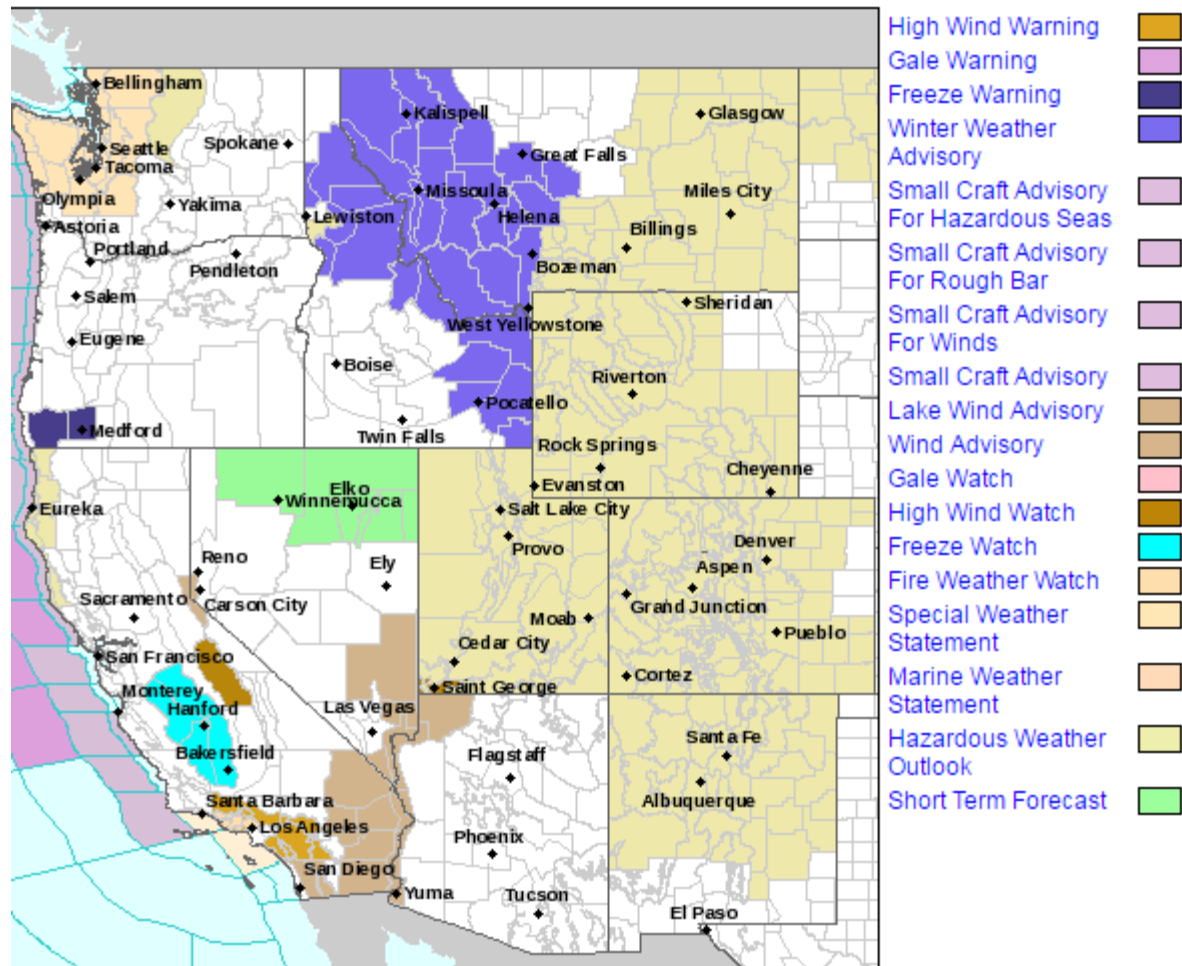

A dry northwesterly to northerly flow aloft will be over the region through Saturday. Although there will be some mid and high clouds at times, precipitation is not expected. High pressure will be the dominant feature, and some sheltered low spots will see strong inversions form, and low stratus and fog may develop. Wind-prone areas from the western Sierra slopes to the coastal range will see north to northeast surface winds gust to 20-30 mph, mainly in the mornings. By late Saturday the next Pacific storm system will approach the North Coast. Clouds and south to southwest winds will increase across the region late in the day and overnight. Light rain will reach far northwestern California Sunday morning, and spread across the far northern end of the region during the day. Snow levels will be 4000-5000 feet. Most areas will just see more wind and clouds on Sunday, however. A second system will spread more light rain and snow across the northern half of the region Monday evening. Snow levels will be 2000-4000 feet. Stronger and wetter systems are expected toward the mid to latter parts of next week.

SOUTHERN CALIFORNIA

A trough dropping south from Canada will bring below normal temperatures to the area through Friday. Maximum temperatures will be in the upper 30s and 40s across the mountains and mid 50s to mid 60s in the valleys today, with 30s to low 40s across the mountains and 50s to low 60s in the valleys Friday. Minimum humidity will be above 30% away from the deserts today and then drop to 15% to 30% Friday. Temperatures will warm around 10 degrees Saturday and another few degrees Sunday as a ridge of high pressure builds into California from the Pacific. Minimum humidity will drop into the single digits and teens away from the San Joaquin Valley and its surrounding foothills this weekend. North to northeast winds of 20 to 40 mph with gusts to 60 mph will surface across much of Southern California Friday morning through Saturday evening. A Pacific trough will drop down the West Coast bringing well below normal temperatures and a chance of showers with light rainfall totals to the region early next week. This trough will also bring strong westerly winds to the mountain ridges and desert passes early next week.
